

Recover Announces Successful Start Up of the Lodgepole Oilfield Waste Management Facility

Calgary, Alberta – November 14, 2018 – Recover Energy Services Inc. (“Recover”), is pleased to announce the opening of its first Oilfield Waste Management Facility in Lodgepole, Alberta. This facility is the culmination of ten years of research and development and will offer upstream oil and gas companies a cost competitive and more environmentally sustainable alternative to Class II landfills.

This facility will provide a valuable service for our customers in the region and serve as Recover’s template for the numerous expansion opportunities throughout North America.

About Recover Energy Services Inc.

Recover is an environmental technology company with a proprietary method of treating oil base drilling cuttings waste. We provide an industry leading customer focused waste management solution to upstream oil and natural gas companies operating in the Drayton Valley, Alberta area.
